## Heatguard

Create a bright and temperate environment  
in your farm building.

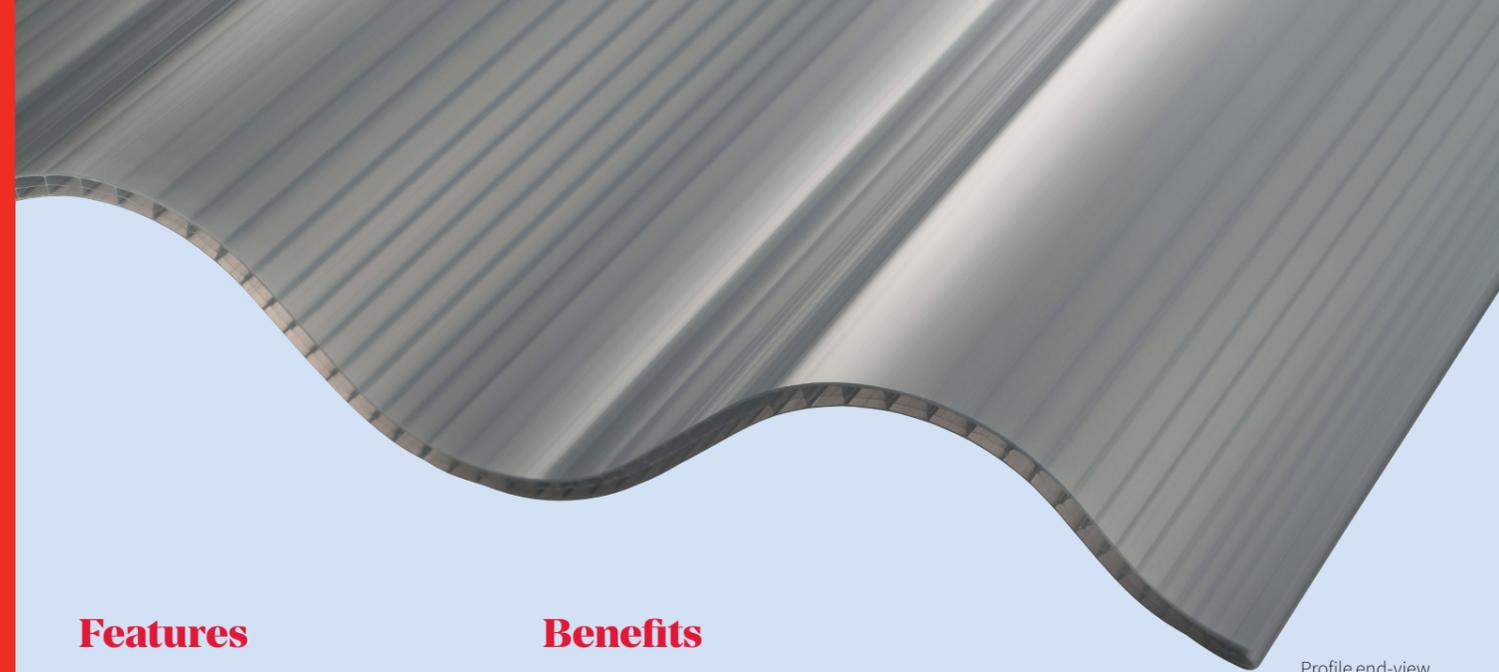

# At Euronit, we are passionate about innovation and delivering the best possible environment for both animals and farmers alike.

**Euronit Heatguard is an innovative and durable solution in the Irish agricultural roofing landscape. The sheet's high reflective pigment repels harmful infrared rays from penetrating the farm building's roof while simultaneously allowing increased daylight to enter.**

These actions ensure that building brightness is maximised while maintaining a stable temperature at all times. Heatguard enjoys a triple wall interior which provides stability and added insulation, while brightness levels can be determined by choosing from three different pigment specifications.

In collaboration with our partner, **Brett Martin**, we provide Marlon CST Heatguard, known as Heatguard, in our Euronit product range to firmly deliver a one-stop-shop for agricultural roofing in Ireland.

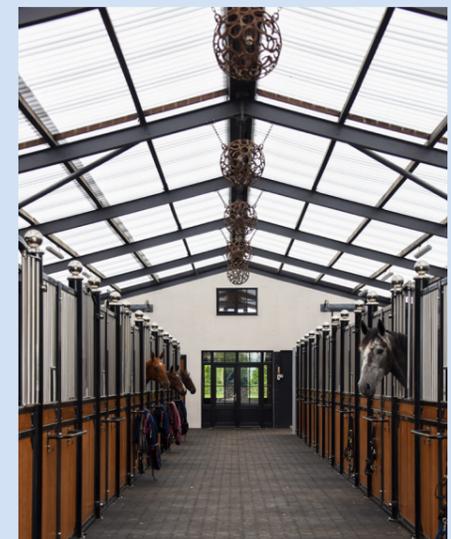

Profile end-view

## Features

- Triple wall structure
- Lightweight
- Easy to handle and install
- Versatile spanning capabilities
- Optically clear
- FarmTec profile

## Benefits

- Increases light in the unit
- Repels infrared rays
- Thermally insulating
- Reduces condensation levels
- 15-year warranty

## Light Transmission Matrix

Pigment Specification	Transmission	
	Light	Solar
HG100 (RG)	10%	10%
HG50 (EGWR)	20%	18%
HG25 (COQ)	36%	32%
